

Conclusion

1. Pre-study to show the need of an AR-application
2. FEAR-App implemented in Unity with three main functions
3. User study to analyze the benefit

The results indicate that the Fear-App improves the human-machine communication.

Future Work

- New apple devices do have a depth sensor
- Easy to implement in Unity for the HoloLens 2
- Robot detection instead of QR-Code detection
- Support for multiple robots at the same time
